## **AMENDMENTS**

## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1. (Original) A four-stroke engine comprising:
  - a crankcase;
  - an oil reservoir located within the crankcase; and
- means for vibrating the crankcase to mist oil from the oil reservoir to lubricate engine components.
- 2. (Original) The four-stroke engine of claim 1, wherein the means for vibrating the crankcase includes the crankcase having a wall thickness of about 1.5 mm.
- 3. (Original) The four-stroke engine of claim 1, wherein the means for vibrating the crankcase includes the crankcase having a wall thickness of less than 1.5 mm.
- 4. (Original) The four-stroke engine of claim 1, wherein the means for vibrating the crankcase includes a vibration mechanism coupled to a portion of the crankcase.
- 5. (Original) The four-stroke engine of claim 4, wherein the vibration mechanism is a vibration plate.
- 6. (Original) The four-stroke engine of claim 4, wherein the vibration mechanism is a vibration spring.
- 7. (Original) The four-stroke engine of claim 4, wherein the vibration mechanism is coupled to a bottom portion of the crankcase.
- 8. (Original) The four-stroke engine of claim 1, wherein a clearance area located in the crankcase is less than 10 mm.

Appl. No. 10/719,148

ري.

Amdt. Dated March 1, 2005

Reply to Office action of December 3, 2004

- 9. (Original) The four-stroke engine of claim 1, wherein a clearance area located in the crankcase is about 1.5 mm.
- 10. (Original) The four-stroke engine of claim 1, wherein a clearance area located in the crankcase facilitates splashing of the oil against a counterweight.
- 11. (Currently amended) A four-stroke engine comprising:

a crankcase;

an oil reservoir located within the crankcase; and

means for misting oil from the oil reservoir without the use of an oil dipper, wherein the means for misting oil includes providing a clearance area in the crankcase which is less than 10 mm such that a surface ripple in the oil reservoir splashes against a counterweight in the engine.

- 12. (Cancelled)
- 13. (Cancelled)
- 14. (Currently amended) The four-stroke engine of elaim 12 claim 11, wherein the clearance area is about 1.5 mm.
- 15. (Original) The four-stroke engine of claim 11, wherein the means for misting oil from the oil reservoir includes utilizing engine vibration to produce a ripple in a surface of the oil.
- 16. (Original) The four-stroke engine of claim 15, further comprising a vibration mechanism coupled to the crankcase to amplify the ripple.
- 17. (Currently amended) A four-stroke engine comprising:

a crankcase;

an oil reservoir located within the crankcase; and

Appl. No. 10/719,148 Amdt. Dated March 1, 2005 Reply to Office action of December 3, 2004

means for misting oil from the oil reservoir without the use of an oil dipper The four-stroke engine of claim 11, wherein the crankcase has a wall thickness of about 1.5 mm.

18. (Currently amended) A four-stroke engine comprising:

a crankcase;

an oil reservoir located within the crankcase; and

means for misting oil from the oil reservoir without the use of an oil dipper The four-stroke engine of claim-11, wherein the crankcase has a wall thickness of less than 1.5 mm.

19. (New) A four-stroke engine comprising:

a crankcase;

an oil reservoir located within the crankcase; and

means for misting oil in the oil reservoir via engagement of the oil with the crankcase.
